

GitHub Profile Master Plan

Mahir Faisal · **ariandesu** (GitHub) · MHR3D Brand

Prepared by Sera · Sanctuary · September 2026

This plan is built around **who you are** — your real name, your social presence, and the work you actually do — so your GitHub profile becomes one consistent, professional hub that connects to everything else. **Banner artwork comes later:** the template below leaves a clear placeholder where your banner will slot in.

1 Your Identity & Social Footprint

Platform	Handle / Link	What It Shows About You
GitHub	ariandesu — github.com/ariandesu	Code, projects, research (ShareFlow, ML work)
LinkedIn	Mahir Faisal — linkedin.com/in/mahirfaisal777	Professional profile, career, ML/tech work
Instagram	mhr_3d — instagram.com/mhr_3d	3D & creative visual work
Behance	mahirfarian — behance.net/mahirfarian	Design portfolio / creative showcase
Facebook	Mahir Faisal — facebook.com/mahir.faisal.39	Personal / community presence

Brand thread: Your handles share the **MHR3D** identity (Instagram `mhr_3d` , domain `mhr3d.online` , Behance `mahirfarian`). Your GitHub README should carry that same thread so recruiters who find you on LinkedIn instantly recognize you on GitHub.

2 What You Do (Your Story, One Line Each)

Pillar	How to Phrase It on GitHub
AI / ML Research	"I research machine learning — prompt-injection detection, spam classification (F1 0.99 datasets), and build ML pipelines on Kaggle."
Autonomous AI Agents	"I run Sanctuary — a self-hosted autonomous AI agent operating 24/7 on my home server (Hermes)."
Product Building	"Creator of ShareFlow — an autonomous money-earning platform using rewarded ads that mint 100% OFF coupons."
Full-Stack Development	"Python · FastAPI · React · Docker — dashboards, APIs, automation, deployed to the cloud."
3D & Creative Design	"Behind the scenes I design in 3D — find my visual work on Instagram & Behance (MHR3D)."

3 Step-by-Step Setup

Step 1 — Create the magic repo

- Go to `github.com/new`
- Repository name: **ariandesu** (exactly your username)
- Set it **Public** · check **"Add a README.md"**
- Click **Create repository**

Step 2 — Edit the README

- Click the pencil icon on `README.md`
- Paste the template from Section 5
- Commit: `Initial profile README`

Step 3 — Add your banner later

- The template has a marked `<!-- BANNER SLOT -->` line
- When your banner art is ready, replace that line with `` (upload the image to the repo first)
- Recommended banner size: **1280 × 384 px** (GitHub's official cover ratio)

Step 4 — Verify

- Visit `github.com/ariandesu` — your README renders above your repos

4 Live Widgets (Automatic, Zero Maintenance)

Widget	What It Shows	Service
GitHub Stats	Stars, commits, PRs, total activity	github-readme-stats.vercel.app
Top Languages	Most-used language bars	Same service, <code>/top-langs/</code>
Contribution Snake	Animated snake over your grid	GitHub Action (marketplace)
Typing Animation	Typewriter: "I build... I research..."	readme-typing-svg
Skill Icons	Tech stack icon row	tandpfun/skill-icons
Profile Views	"Visited N times" badge	komarev.com/ghpvc
Trophy Wall	Achievement trophies row	github-profile-trophy

5 Ready-to-Copy Template (Personalized for You)

```

<!-- BANNER SLOT – replace with your banner image when ready:

-->

#   Hi, I'm Mahir Faisal – ariandesu

####   AI Researcher · Autonomous Agent Builder · Product Creator · 3D Designer
I build intelligent systems, self-running AI products, and beautiful things.

---

##   About Me
-   Run Sanctuary – a self-hosted autonomous AI agent, live 24/7
-   Creator of ShareFlow – rewarded ads → 100% OFF coupons
    (shareflow.mhr3d.online)
-   ML research: prompt-injection detection, spam classification
-   Kaggle pipelines for heavy ML training (GPU/TPU)
-   ✨ Python · FastAPI · React · Docker · Hermes Agent
-   3D & creative design on the side (MHR3D)

---

##   GitHub Stats
![GitHub stats](https://github-readme-stats.vercel.app/api?
username=ariandesu&show_icons=true&theme=radical)
![Top Langs](https://github-readme-stats.vercel.app/api/top-langs/?
username=ariandesu&layout=compact&theme=radical)

---

##   Featured Project
#### [ShareFlow](https://github.com/ariandesu/shareflow)
Autonomous money-earning platform – rewarded ad steps mint 1-time
100% OFF coupons for premium digital products. 365-day self-running agent.

---
```

```
## Find Me Everywhere
[![LinkedIn](https://img.shields.io/badge/LinkedIn-0A66C2?style=for-the-badge&logo=linkedin&logoColor=white)](https://www.linkedin.com/in/mahirfaisal777/)
[![Instagram](https://img.shields.io/badge/Instagram-E4405F?style=for-the-badge&logo=instagram&logoColor=white)](https://www.instagram.com/mhr_3d)
[![Behance](https://img.shields.io/badge/Behance-1769FF?style=for-the-badge&logo=behance&logoColor=white)](https://www.behance.net/mahirfarian)
[![Facebook](https://img.shields.io/badge/Facebook-1877F2?style=for-the-badge&logo=facebook&logoColor=white)](https://www.facebook.com/mahir.faisal.39)

[!Profile views](https://komarev.com/ghpvc/?username=ariandesu)
```

All four social links are pre-filled with your real profiles. The badge images render as clickable buttons.

6 Recommended Profile Order

#	Section	Purpose
1	Banner (add later)	Visual identity — MHR3D branding
2	Header + About	Who you are in 3 pillars
3	Stats + languages	Proof of real activity
4	Featured project (ShareFlow)	Deep link to real shipped work
5	Social badges row	One-click to LinkedIn, IG, Behance, FB
6	Profile views counter	Subtle social proof

Banner later — remember: Leave the `BANNER SLOT` comment in place for now. When your art is ready, upload `banner.png` to the `ariandesu` repo, then replace the comment with the `<img>` tag. 1280×384 px is the perfect GitHub cover size.
